

AI for Healthcare Professionals

Use modern AI without putting patient data at risk.

Built for physicians, nurses, clinical staff, and healthcare organizations who take patient privacy seriously.

The Problem

Healthcare professionals handle some of the most sensitive information that exists: diagnoses, treatment histories, lab results, mental health records, and personal health details. Your legal and ethical obligations to protect this information are absolute.

When you use public AI tools like ChatGPT, **you lose control of your data**. Whatever you type travels through servers you don't control, and you can't guarantee where it ends up. Even if you remove names, clinical details can be identified. For healthcare professionals bound by HIPAA and professional ethics, that is a serious risk.

The Solution

TPAI Pro gives you the same AI capabilities as ChatGPT in a private environment. You connect through a secure private link, and the environment cannot send data to the public internet. Your patient information stays protected.

Setup takes minutes. You connect through a secure app we provide, and you're in. Same familiar chat interface: type, paste, upload files. No new workflow to learn.

Use Cases for Healthcare Professionals

Task	How AI Helps
Clinical Documentation	Turn rough notes into structured clinical documentation. Draft discharge summaries, progress notes, and referral letters. Save hours of paperwork each week.
Care Planning	Generate care plan drafts based on diagnoses, patient history, and clinical guidelines. Summarize complex cases for team handoffs.
Compliance Assessment	Review documents against regulatory requirements. Flag gaps in documentation. Prepare for audits and accreditation reviews.
Patient Education	Create personalized patient education materials, medication guides, and aftercare instructions in plain language.
Research & Learning	Review clinical literature, explore treatment options, or get a second perspective on complex cases.

Why It Matters

HIPAA compliance. Most public AI tools are not designed for HIPAA workflows. If you don't have a BAA in place, assume it's not safe for patient information.

Professional ethics. Your licensing board and professional standards require you to protect patient confidentiality. This includes digital communications.

Patient trust. Your patients share their most personal health information with you. That trust is sacred and must be protected.

Clinical Safety

AI helps draft documentation and materials, but you remain the clinician of record. Always review and edit outputs before using them. Not for diagnosis, treatment decisions, or emergencies.

Security Quick Facts

Access	Secure connection app with certificate we issue. This is the only way to access the system.
Network	The TPAI environment has no public internet egress. Your data stays inside the private environment.
AI Models	AI model access occurs via private AWS connections, not public internet.
Encryption	Per user encryption. Each user's content is encrypted separately, so no one else can access your data.
Admin Access	TPAI does not access your content by default. Any access requires your approval and is logged.
BAA	Business Associate Agreement available for HIPAA compliance.
Data Location	Currently the US. EU region planned for Q2 2026. Let us know if you want early access when it goes live.

Pricing

TPAI Pro: \$299/month per user. Includes secure access, encryption, and onboarding.

ROI: If it saves you 30 minutes a day on documentation, it pays for itself. More time for patients, less evening paperwork.

Next Steps

Reserve your beta seat. We're opening a limited beta now. \$99 refundable deposit holds your spot and gets credited toward your first month.
